

Release Notes

Optisoft.NET v 1.2.21329.1

26th November 2021

Issues

Patients Recall

- Corrected a problem with the Import button in Patient Documents enabling incorrectly.
- Addressed an issue with the tab order on the Contact Lens prescription screen.
- Resolved a problem where the user couldn't remove an alarm from a ToDo.
- Resolved an issue that caused an error message if the user printed a document with Clinical Records merge codes in for a patient with no Clinical Records visits.

Appointments

- Resolved an issue where the diary was not being displayed for a newly added staff member.
- Addressed an issue where the appointment history on the booking screen was showing the active patient's appointment history not the patient the appointment was booked for.
- Corrected an issue where the active patient's details were being merge when printing an appointment from the right click menu rather than the booked patient.

Cash

- Corrected an issue where the Email Receipt button was active when a patient did not have an email address their record.
- Corrected an issue where a receipt could be emailed to the previously selected patient.
- Addressed an issue that caused an error which prevented the user from applying adjustments to transactions.

Spectacles

- Addressed an issue that could cause the supplier to be removed from the Sundries on a dispense.
- Corrected a rounding issue with Adjustments.
- Resolved an issue with the BVD field incorrectly displaying in red when a valid value is entered in it.

Stock

- Addressed an issue where the transaction lists across a product were inconsistent after a stock take adjustment had been applied.

Full EGOS

- Addressed an issue with the Parent/Carer address details not being saved correctly.
- Resolved an issue with the submissions list not refreshing after changing branches.
- Addressed an issue where the list of performers was including non-optometrists.

Templates

- Addressed an issue where the filter checkboxes were not correctly hiding or displaying Email and SMS templates.
- Addressed an issue with the Branch selection checkboxes not functioning correctly.
- Addressed an issue where the user could not create new Types for ToDos and use them immediately.

Release Notes

Reports

- Addressed an issue where the Sales report was not following the same product naming format as the other cash reports.

Maintenance / System Wide

- Resolved a problem where the Save button would not activate on the Security Maintenance screen when removing a security option from a user.
- Addressed an issue within Security Maintenance where when adding a new branch to a user it did not save the change correctly.
- Resolved an issue that caused an error when attempting to set up the Optisoft.Net Backup utility for the first time after a new installation.

Release Notes

Changes

Patients Recall

- Added the ability to specify a page range when printing documents.
- Added the ability to 'pin' a note on the Notes tab.
- The Standard Type will automatically be selected on the document selection dialog when printing a document in the Patient module.
- Made a change to prevent the auto-lock feature from locking Optisoft whilst it is processing a recall run.

Appointments

- FNA will now show slots that begin within practice hours but end outside of them.

Clinical Records

- Added the PDs and Prisms to the Clinical Records printout.
- Added a popup to prompt the user to End Visit on a clinical records visit.
- Can now specify Low, Medium or High as Add values.
- Added the ability to create GOS submissions directly from within the Clinical Records visit.
- Documents are no longer available only on the visit they were imported to.
- The Previous boxes will now show the most recent version of that particular page regardless of whether the immediately previous visit contained that page within its pathways.
- Visits will now automatically unlock after one calendar day to allow other users access to them.

Spectacles

- The Adjustments button is now active on the 'Sundries, Fees & Vouchers' tab in a dispense.
- Added Prism to the product Group to allow Prism as an Extra type.
- Added the option to copy a dispense with or without any adjustments from the original dispense.

Full EGOS

- Introduced the ability to batch sign submissions.
- Removed the Confirm button from the signature boxes on all pages of the GOS submissions.
- Added extra filtering options to the submission list screen.

Maintenance / System Wide

- The settings screen in the Patient module has been redesigned to make better it easier to understand and allow space for new settings.
