

Release Notes

Optisoft.NET v 1.2.21342.2

9th December 2021

Issues

Patients Recall

- Corrected an issue that included the New Note button in the tab order.
- Addressed an issue that was preventing the Copy Rx function from working on contact lens prescriptions.

Email / SMS

- SMS messages that were originally sent as part of a group message can now be deleted from single recipients without it attempting to delete the message from all of recipients.

Appointments

- Resolved an issue with the Appointment Schedule report not being created when requested from within the diary screens.
- Corrected a problem with Event recurrence when no staff member is specified for a free-typed event.

Cash

- Addressed an issue with pre-saved Adjustments no longer applying correctly.
- Resolved an issue that allows Petty Cash transactions to be reversed multiple times.
- Resolved an issue that meant that products that did not have a specified VAT type were not correctly being assigned the Type's VAT type if they were added to the transaction by scanning their barcode.

Spectacles

- Addressed an issue with free-typed Sundries being removed from the dispense on Save.

Clinical Records

- Resolved an error that was occurring when attempting to create a GOS3 submission when no optometrist was selected.
- Addressed an issue with the Page Options maintenance that was resulting in adjustments to their order not being saved correctly.

Stock

- Addressed an issue that was causing negative cost prices to be entered for items under certain circumstances.

Full EGOS

- Resolved an issue that prevented the user from selecting the Same Address As Patient option for the Patients Carer or Guardian on the GOS1 submission.

Release Notes

Reports

- Addressed an issue with the Stock Level report that was causing adjustments created by a stock take to not be correctly included in the calculations.
- Addressed an issue with the Cash Sales report incorrectly calculating the totals for Types when adjustments have been applied.

- The VAT report not correctly displaying a grand total for product types that have been refunded but not sold in the reported period.

Maintenance / System Wide

- Made adjustments to some labels to correct some minor display issues and inconsistencies.
- Addressed an issue on new databases where the VAT type was not being automatically being assigned to Types.

Release Notes

Changes

Patients Recall

- Added the patient's Reference number to the list of fields included in the Recall Export.

Email / SMS

Appointments

Cash

- Added a Refresh button to Till Reconciliation to update the list with any transactions that have taken place since the reconciliation process was started.
- Adjustments are now displayed on the receipts.

Spectacles

Clinical Records

- Contact Lens prescription summary now displayed on the GOS3 creation screen as part of the End Visit screens.
- Added two new buttons to allow the user to move to the Previous or Next Pathway in a visit.
- Made a change to allow a user to go back and update Contact Lens Rx notes on a completed visit.

Stock

- Added a new total Quantity column to the stock list screens.

Full EGOS

- Batch Signing should now be available for all GOS forms currently in the full EGOS module.
- The name of the form is now displayed when creating or editing a submission.
- Added a Performer filter to the submission list screen.

Maintenance / System Wide

- When printing a template, the print dialog will automatically select the correct document type for the module.
